## History

Rostec Flags is an esteemed flag company situated in Pretoria that has built much of its success on a valuable relationship with the South African government and military service stretching back to the founding of the company in 1994.

The company's first government tender came at a time when flag making capabilities in South Africa were limited at best. As part of the tender Rostec took charge of an immense project that saw 65 000 flags manufactured by several sub contractors and distributed by Rostec Flags, all in the space of 8 months.

Since then Rostec has been working closely with the South African government, Military Service, Police Service and Air Force, acting as their main supplier of flags and regularly providing them with large scale orders.

## Quality and Service

In its early work with the government Rostec Flags acted very much as a consultant in laying the foundations for the manufacturing and supplying of large flag orders as well as the regulation and modernization of the flag manufacturing process in South Africa.

They soon became involved in the formation of the SABS flag committee, a body that sets out and regularly updates the specifications and quality standards of flag printing and manufacturing in South Africa. As an active member of the SABS they have remained a frontrunner in maintaining the highest quality and service standards in the industry.

## Rostec today

Rostec Flags has continued to grow and expand its horizons to become more than a flag company. Printing technologies such as flat bed printing, dye sublimation and direct digital printing provide Rostec with endless printing capabilities and a wide range of products. These techniques have meant that Rostec has been able to grow its product range from traditional flags to a full range of branding products, including: outdoor display banners, indoor display banners, fabric frames, banner walls, branded gazebos and an array of others.

who are we?

## materials

### ***Bunting***

Traditional flag material woven from 100% polyester spun yarn. This type of material is commonly used throughout the flag industry worldwide. Rostec have their bunting woven to a specification exceeding all standards. The weight is 160gms/m and the breaking strength is over 900N making it the strongest bunting in use.

### ***Ultrasheen***

A self-locking 3-yarn warp-knit flag material made from 100% polyester filament yarn with gloss finish. It is lightweight and durable. Due to its construction and speed of production, it is most economical to produce and brings down the cost of the flags considerably. This type of material is fast becoming the standard in Europe.

### ***Ribtex***

This revolutionary flag material is unique, having been developed to suit extreme conditions and where price is a factor. It is self-locking warp-knit with small-reinforced "holes" and ribs knitted into the material for better airflow and strength. The unique design requires no hems or stitching, further reducing the cost. Ideally suited for vertical flags.

### ***Bannerweave***

An exceptionally strong, medium weight 100% polyester woven material specifically for banners. It has a matt finish, which does not reflect light yet colours appear extremely bright.

### ***Pongee***

Used mainly for desk/table flag.

### ***Gazebo Canvas***

Water resistant coated polyester material.

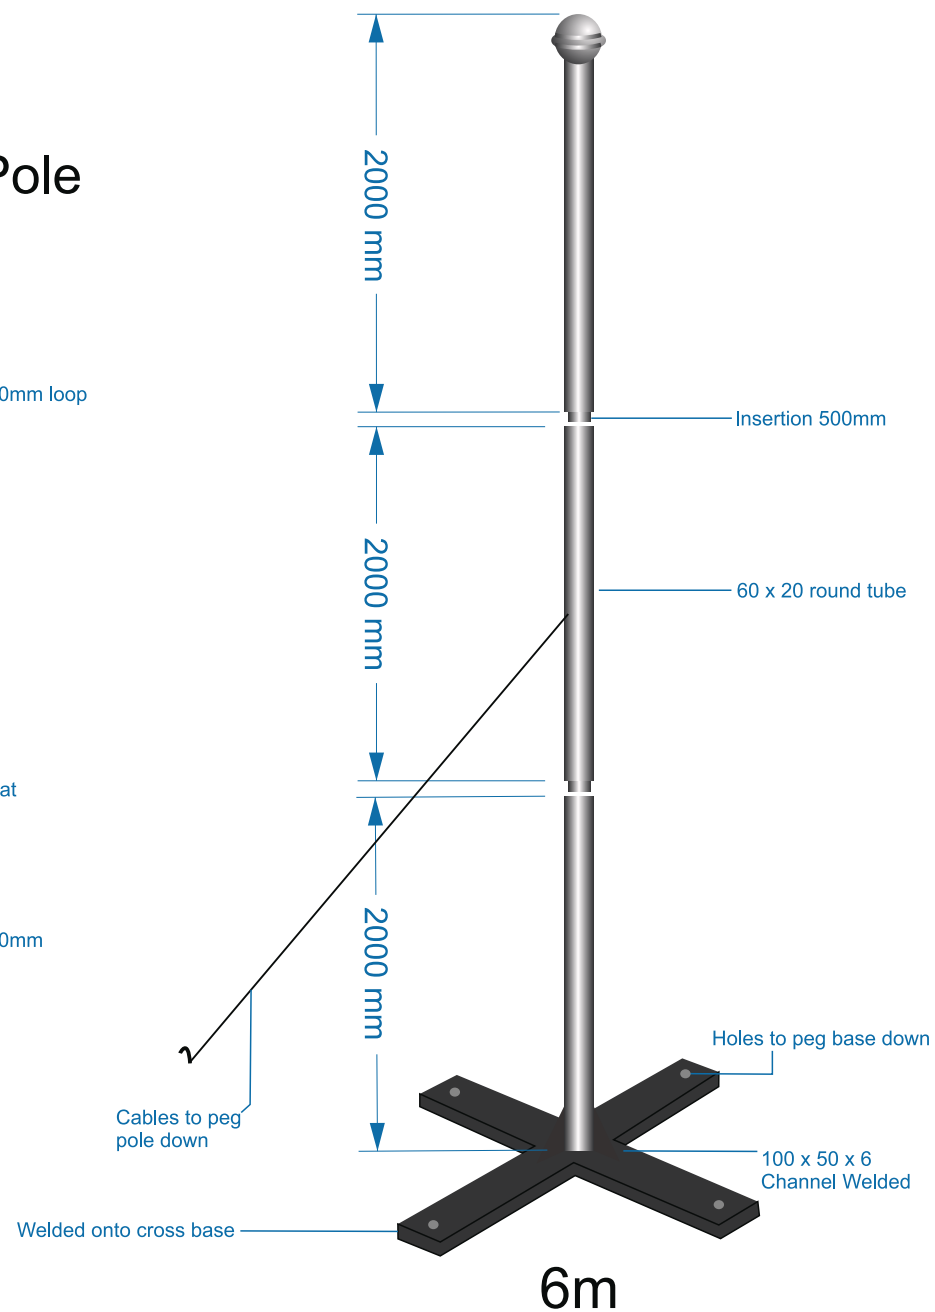

#### PARK A POLE

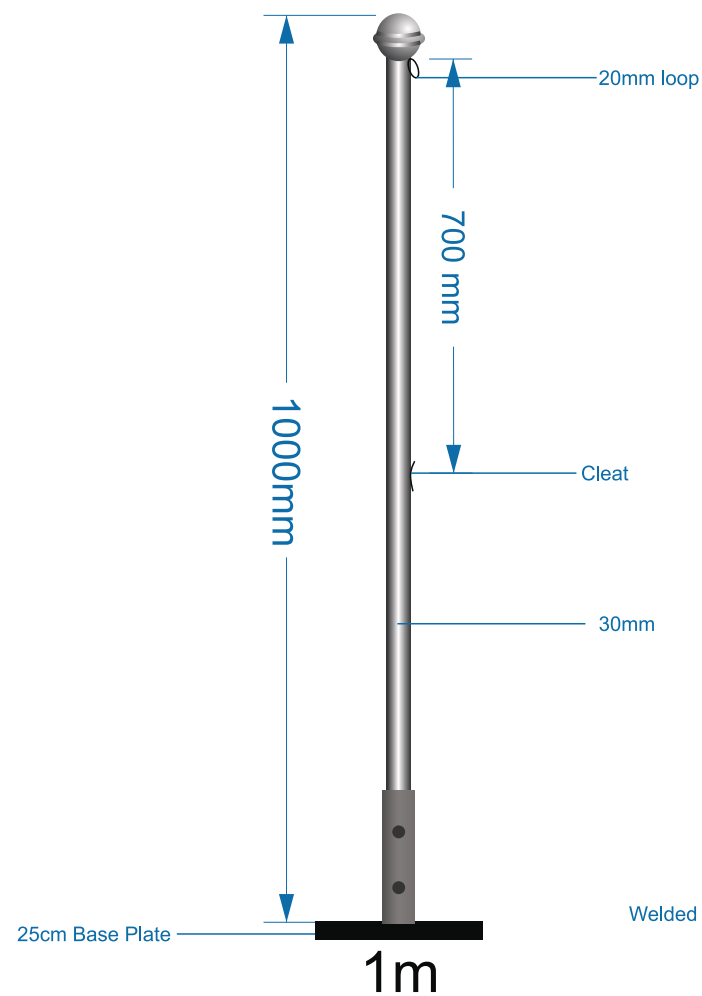

- Park a pole stands are made from light, maintenance free aluminium
- May be powder coated to any colour
- Park a pole made to clients spec's
